

QSA

Quantum Science Audio

Bezpieczniki produkcji QSA w Technologii Qwantowej

„Quantum Science Audio, the undisputed heavyweights in the audiophile fuse space. With more than 22 years of research into”

The QSA brand uses our world’s only Musical Metal Molecule Alignment Technology (MMMAT) and Metal Active Technology (MAT).

Qs audio are group of audiophile engineers to design top ultimate audio products on earth.

Quantum Science QSA fuse innovative technologies:

- 1 / musical release / burst technology ,reduce the impact of digital sound
- 2 / Metal molecular noise reduction technology, background noise much lower and more detail.
- 3 / Metal molecule compression arrangement technology, the resistance is 5 to 30% lower than other brands,enhance speed of transient response.
- 4 / Metal activation technology, increases the electron flow per second ,improve the charge transfer efficiency at the metal-molecular interface, so that enhance Micro dynamic.
- 5 / physical resonance point adjustment technology,the sound field is more stable.
- 6 / Use seeThrough effect to eliminate interference,improve the accuracy of sound image localization and achieve the studio playback level.
- 7 / Use X-element quantum technology eliminates interference.
- 8 / use 10.5% silver solder to contact, improve sound transparency
- 9 / Micro-nano contact point technology, the low frequency is more stable and down to botton.
- 10 / using super alloy material as a fuse wire,the sound is more harmonious.
